

Underwater Investigations: A Primer on How to Perform Them Properly AND How to Make it a Successful Part of Your Business

Unfortunately Marine and Marine Aviation accidents and events occur, and these incidents can be deadly and potentially cause huge losses for insurance companies and other interested parties. When an incident occurs, a proper investigation must be performed to determine how the accident occurred and whether or not a specific party is responsible. The task varies greatly from search and recovery of lost or “missing” vessels and/or discarded items, investigating damage to vessels or shore facilities – [docks, marinas and boatyards], taking photographs, checking security concerns, and investigations including crime scene investigation and human recovery. You would be surprised at what you might find underwater. This primer into the world of successful Underwater Investigations will cover the basics and introduce attendees to the tools and skill sets needed to successfully complete an underwater investigation and to broaden their offerings to their clients.
